EXPERIENCE

Mar 2022–Aug 2025	Bosch Corporate Research Industrial PhD student <ul style="list-style-type: none">• <i>Supervisor</i>: Dr. Niels van Duijkeren• Research and development of robust and stochastic model predictive control (MPC)-based controllers for motion planning of mobile robots, explicitly accounting for human motion uncertainties and system disturbances. The optimal control problems (OCP) are formulated with few approximations of (robust) collision-free conditions. Algorithms that efficiently address the numerical challenges of the resulting OCPs are proposed. The developed controllers enable real robots to navigate safely and smoothly in tight spaces.	Renningen, Germany
